Project *update*

Redcliffe Wastewater Outfall Replacement
Out of hours' work

Our delivery partner, **Downer,** and their subcontractors are continuing work on replacing sections of the ageing wastewater pipeline between the Redcliffe Wastewater Treatment Plant and discharge point in Hays Inlet.

To reduce the project duration and minimise disruption to the community, the team will be undertaking work on Saturdays from **mid-October** to **late December 2026.**

In addition, **two days of night work** are planned between **late October/early November**, weather and site conditions permitting.

Works hours

- Our standard working hours are Monday to Friday, 6:30am to 6:30pm.
- Saturday work will be undertaken between 6:30am and 3:00pm.
- Night work will be undertaken between 6:30pm and 5:00am.

What to expect

- Out of hours' work will involve the same activities and equipment used during standard construction hours.
- Some noise, dust and minor vibrations may be experienced while equipment and machinery are in use. We will minimise this where possible.
- You may notice reverse beepers, vehicle movements, and flashing lights. Every effort will be made to reduce disturbance during the evening.

Contact the project team
