Comments

1. For above ground installations, a not oil-emulsifying pump must be used with this infrastructure. Vortex type pumps and standard rpm helical rotor type pumps are considered to be oil-emulsifying pumps and are not authorised for use with this infrastructure (Joint Committee Approval No. 96-0030 and 96-0031).
2. Additional pre-treatment: Infrastructure is designed to also remove heavy metals, neutralise acidic wastes and disinfect.
3. Related standard products: Skimmer device and 500 litre waste oil and solids storage tanks
4. The diaphragm pump must be used with this infrastructure. Vortex type pumps and standard rpm helical rotor pumps are considered oil-emulsifying pumps and are not authorised for use with this infrastructure. Pump rate must not exceed the pre-treatment devices rated treatment capacity
